

Notes:

- To unlock Red Zones with DJI GO, the mobile device must be connected to the Internet during step 1 to 4, and it is recommended to use an iPhone if using Phantom 3 Standard/4K/SE since Android devices can't access cellular network while connecting to remote controller's Wi-Fi.
- Step 1 to 4 can be completed even outside the unlocking area, so please prepare it at home if there is no internet connection in unlocking area.
- Unlocking function will be disabled every time the aircraft lands, so please conduct step 5 and 6 if needs to take off again.

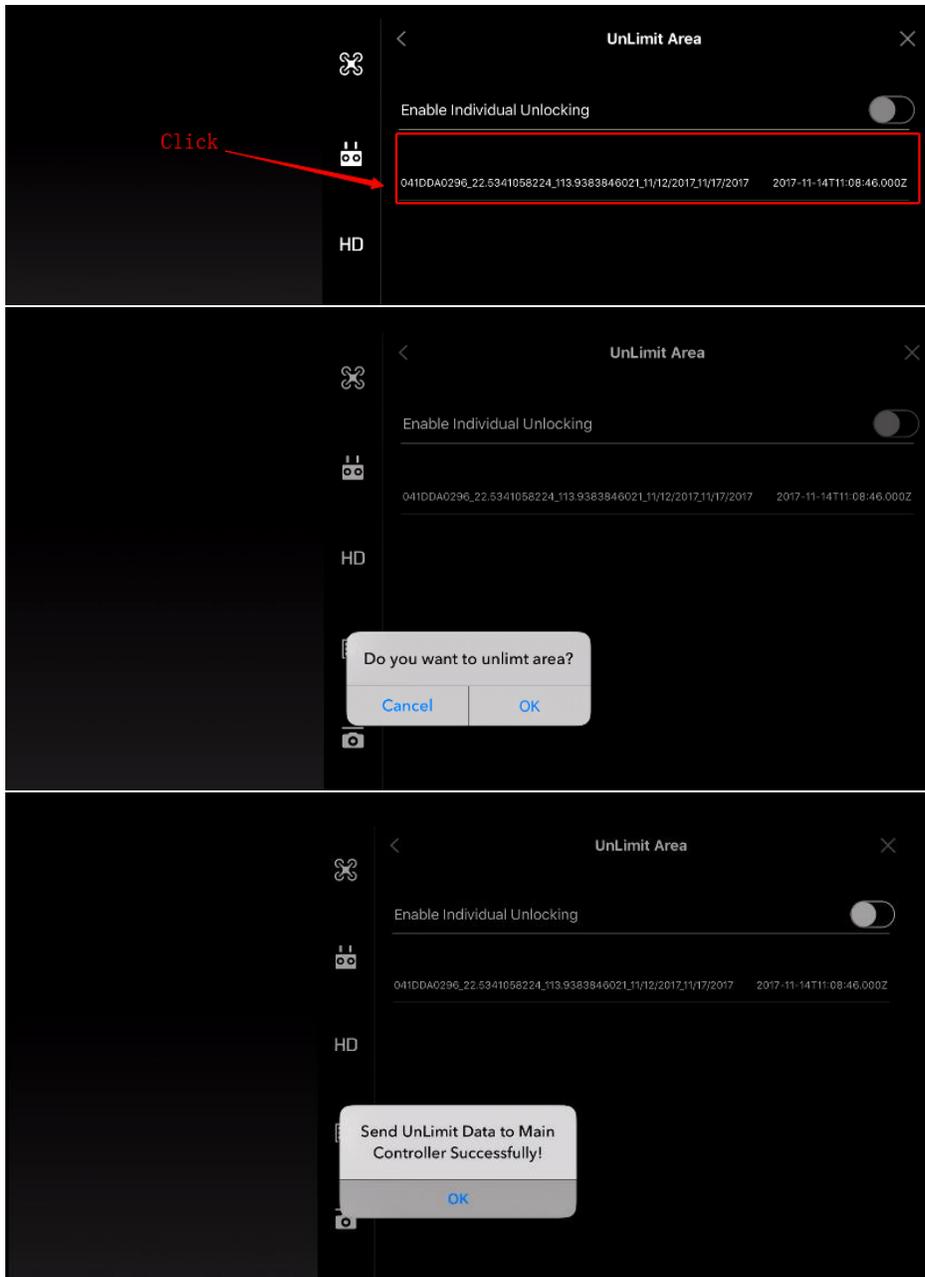

Step 1: Power on the aircraft and remote controller and ensure that the remote controller has been linked to the aircraft successfully.

Step 2: Connect the device to the remote controller with a USB cable (Connect to remote controller's Wi-Fi if using P3S/4K/SE). Launch DJI GO and login with DJI account that was submitted while requesting custom unlocking online.

Step 3: Go to the camera view and General Settings. Tap "Unlocking List" and the "Enable Individual Unlocking" switch and the unlocking license will be shown on the screen. (Click on "Synchronize Unlock Information" if the license doesn't appear.)

Step 4: Tap the unlocking license, as shown in the red box. A "Do you want to unlimit area?" prompt will pop up. Tap "OK" and a "Send Unlimit Data to Main Controller Successfully" prompt will be displayed on the screen.

Step 5: Place the aircraft in the area that you requested to be unlocked. When the number of GPS satellites is more than 10, tap “Unlocking List” again and the “Enable Individual Unlocking” switch will turn white and can be turned on. Slide the switch to the right to enable it. Now, the area is unlocked.

Step 6: When the “Enable Individual Unlocking” switch is turned on, go to the map view in DJI GO and a green zone will be shown on the map indicating the area that you have requested to unlock. You can only fly the aircraft within the green zone. To fly outside of the green zone, turn off “Enable Individual Unlocking” in DJI GO.
